PACIFIC-EUROPE NETWORK

FOR SCIENCE, TECHNOLOGY and INNOVATION

Report on dissemination and communication

Deliverable D7.4

**Prepared by Fadhila Le Meur
(Institut de Recherche pour le Développement)
and Rado Faletic
(Montroix Pty Ltd)**

Table of Contents

Introduction

The dissemination and communication activities in the PACE-NET Plus project have been carried out within Work Package 5 (Task 5.1 Understanding and promoting Horizon 2020 and other European programmes) as well as within Work Package 7 (Task 7.5 Communication strategy and dissemination material).

The purpose of this deliverable is to report on the project's dissemination and communication activities that have been promoted during the 36 months of its activity, i.e. September 2013 to August 2016. In particular, this document highlights the main achievements with respect to the key communication tools the Consortium has identified and selected, which are:

- The **PACE-NET Plus public website** and Intranet collaborative space for the project partners;
- The project outreach generated so far via the **partners' dissemination** through their own channels and through the project social networks;
- The participation of project partners in selected events such as **Info Days**;
- The produced presentations and **promotional material** (project logo, promotional leaflets, project compendium etc.).
- Last but not least, a short **film** on the project.

The dissemination strategy has developed throughout the entire project period on the coordination team's instructions and on the PACE-Net Plus partners' own initiatives As the table of the partners communication and dissemination efforts reflects here bellow, the core part of the PACE-NET Plus dissemination and communication strategy has been performed by Montroix Pty and IRD, with the active contribution of all project partners, mainly ANU and LCR.

Communication tools

Logo

In order to keep the project's identify and sustain the communication work already done in the former project, the PACE-NET Plus logo was built on the former project logo.

Flyer

A project flyer was elaborated, that summarized the objectives and contents of the project. Link to our Flyer (English version):
http://plus.pacenet.eu/sites/default/files/PACE-Net%20Plus%20flyer%20english.pdf

PowerPoint Presentation

A PowerPoint presentation (in French and English) was elaborated as well, that the Partners adapted and used for each of their project presentations.

Press releases

A communiqué, or a press release has been produced and disseminated on each of the many project events (most of the time in French and in English) (see dissemination table here after).

Newsletter

Five Newsletter issues have been elaborated by IRD and posted through the website in the run of the project, to promote its main events and activities.
Link to our Newsletters: http://plus.pacenet.eu/newsletter/pacenetplus

Website

The website was the primary point of public information about the project, its activities, and outcomes. It utilised the same web address (http://pacenet.eu/) as the previous PACE-Net project, in order to ensure that people familiar with the previous project can continue to find information and receive support. The content from the previous website still exists *via* the http://old.pacenet.eu/ web address.

The website's purposes are to:

- Inform the public of the PACE-Net Plus project and activities
- Provide information about news, events and funding relevant to Pacific and/or European STI collaborations
- Allows members of the public to join the PACE-Net Plus community
- Deliver the PACE-Net Plus newsletter
- Provide a repository for documents (reports, presentations, photos, etc) relevant to the project
- Provide support (information and contact information) for Pacific researchers interesting in Horizon 2020
- Increase the profile for Pacific-Europe STI collaborations

On the last point, a significant aspect to improving the visibility of the PACE-Net Plus website is to increase project's online activity. This is achieved through:

- Publishing (or re-publishing) relevant information on the PACE-Net Plus website. This directly improves the "page ranking" of the website (i.e. the position on the list of search results, for example, when performing a Google Search for information connected with the project).
- Actively engaging in relevant social media sharing and engagement. In particular, the project has established a Facebook page and a Twitter account to highlight important information and events about the project, and also broader material of relevance (e.g. Marie Curie news on Facebook).

Initial development of the website took place during October/November 2013, and it has continued to receive enhancements.

One of these enhancements was the implementation of "Groups". These Groups allowed for registered users to select their area of preference (subdivided into the PNP priority thematic areas) in order to more readily gain access to relevant information. The intention was for this to provide a starting point for a Community of Practice (CoP).

Establishment of a CoP has been in the mind of the website developers since the beginning of the project. However, in order to be feasible, there needs to firstly be a critical number of users utilising the website regularly. The above strategies, to improve the visibility of the website, were the primary means with which to facilitate this (in addition to project partners personally inviting individuals to register on the site).

However, despite promoting the feature at project events, the Groups have received little interest from the community. This almost certainly comes down to the fact that the "community" (of EU and Pacific researchers seeking bi-regional collaborations) is still a small number; hence it has not been able to accumulate enough critical mass to sustain meaningful online activity.

In light of this, during the course of the project the strategy has been to shift focus away from a dedicated CoP mechanism and more onto existing social media channels. This has proven more successful, as information shared by the project has more readily become engaged with relevant individuals. Similarly, those connected to PNP via social media have also shared relevant information and dialogue via their social media accounts, which has been picked up by the PNP project, and generated online discussion and dialogue amongst the social network communities.

Additionally, at the conclusion of the project, and in conjunction with the Leaders of the Future event in Auckland, Montroix Pty has established a closed email list, for exclusive use my members of the ST&I working group and key Pacific contacts, in order to continue to facilitate good policy development on the back of the excellent work initiated by the PNP project.

Fig. 1: The PACE-NET Plus Project Homepage

The project Website has been regularly updated with continued development bringing new features online. It is to note that a History section has been added in the menu to provide access to the important documents of the previous PACE-Net project. PACE-NET Plus is also on Twitter (@pacenetplus) and Facebook. Project Website: http://plus.pacenet.eu/

6

Towards the end of the project, activities around the project's ST&I working group has led to the development of a new website, http://pacenet.plus/, that will continue to serve the Pacific (and Pacific-Europe) ST&I community after the conclusion of the project. The project's website (http://plus.pacenet.eu/) has been archived and will continue to be available as a static website in order to keep the outputs of the project visible and available for the near future.

At the end of the project, there were 267 registered users on the website (see Fig 2. Users' location, for an approximate location of these users).

Fig. 2: Users location

After the initial development and launch of the website (weeks 0-15), visitor numbers to the website steadily increased on a weekly basis (from around 100 unique visits per week, to around 350 unique visits per week) until the mid-point of the project. See (fig.3 Visitors data). This corresponds to the project's significant activities, including think-tanks as well as seed funding, culminating in the Brussels bi-regional policy dialogue.

Subsequently, after the Brussels bi-regional policy-dialogue, the project has *shifted gear*, with far fewer high-profile activities, instead focussing on delivering the seed funding, innovation studies, and the ST&I working group. The final two peaks (around weeks 116 and 144) correspond to the OCTA Innovation event in Noumea and the bi-regional policy dialogue in Nadi (Fiji).

7
Fig. 3: Visitors data – Number of unique visits, per week to the Website

These visitors are from across the globe, though not surprisingly dominated by Pacific and European locations (fig. 4 Visitors Country). Note the high percentage for Australia, as this is where the webmaster is located. Also, interestingly, there is a high percentage of visits from India. This is almost certainly due to the fact that there is an internet service provider in India named "PACE-NET", which no doubt causes the PACE-Net Plus website to appear in search results for this Indian company.

Fig. 4: Visitors Country

Visitors city also gives an indication of the cities where website visitors are located.
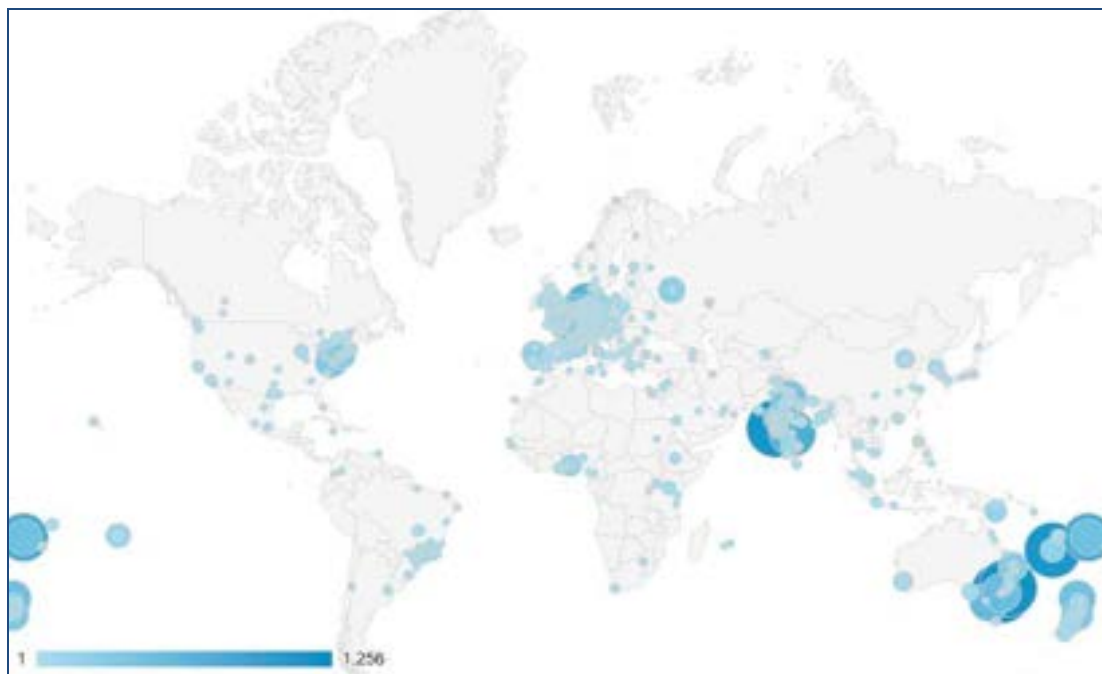

Fig. 5: Visitors city
Use of social networks

In addition to the website, the project has also maintained a social media presence, in particular on **Facebook** and **Twitter**. We have found these channels to be an effective means of reaching a broader group of people than the website, due to the fact that information shared on social media will appear in the accounts of interested people, regardless of whether or not they have connected with the PACE-Net Plus accounts.

Utilising the PACE-Net Plus Website, plus social media presence (Twitter and Facebook), task partners have continued to highlight news, events and funding opportunities that have arisen in the Pacific region. This includes, for example, international conferences, job openings, scholarships and fellowships, travel grants, and new research outputs.
Fig. 6: PACE-Net Plus social media engagement

The chart in Fig. 6 displays indicative levels of engagement. The "Twitter impressions" indicate the number of people who saw an item that was shared *via* Twitter. This peaked in June 2015 when IRD posted a tweet about the PACE-Net Plus workshop on observatory systems. IRD has many thousands of followers on its Twitter account, hence the large engagement. The level of engagement with Twitter has reduced since then.

However, the decline in Twitter engagement has given rise to more engagement *via* Facebook. In particular, Facebook has more easily enabled the sharing of multimedia, including photos and videos, which makes these articles more appealing for people to explore in more detail. The final peak for the project's 'Facebook reach' (which similarly tracks the number of people who see an item shared via Facebook) corresponds to the sharing of the project's video. This video was further shared extensively by many of the project partner organisations, as well as the individuals involved.

Fig. 7: The PACE-NET Plus Facebook Page

Film

As the project coordinator, IRD made a film on the project, collecting statements from the project partners and key stakeholders from both regions, during several events that took place in 2015 and 2016. These shared their views on the project but also their vision of Research in ST&I in the Pacific. The film shows the variety of organisations and diversity of people who engaged, as well as the many topics addressed in PACE-Net Plus. See: https://www.youtube.com/watch?v=CCVx6S_-NoI

Fig. 8. The project film posted onto YouTube

Project Compendium

This booklet, displaying all the project outcomes is being developed as this deliverable is being written. It will include the following sections and will be disseminated to all the project key stakeholders at the very end of the project:
- Introduction (background)
- Regional context of STI research in the Pacific
- State of the Art (Directory + Bibliometric analysis)
- Non Communicable Diseases and infectious diseases in the Pacific
- Agri-aquaculture
- Ciguatera and ciguatoxins
- Water & Waste management
- Mining & its environment
- Observation systems of the Climate change in the Pacific
- Innovation in the Pacific and opportunities for Europe
- Seed-funding
- Recommendations for enhanced bi-regional partnerships
- Towards a Pacific ST&I Framework
- Regional and bi-regional dialogue (STI group)
- PACE-Net Plus (other) success stories (PIURN/USP, SIDS Conference/NUS, Pacific Fund on water/ANU, etc.)
